Research Assignment 2 : Brightlearn — 17 September 2026

Business analytics Technology

Data, Measurement & Reporting

ii) Structured data : is information organized in a predefined, tabular format - typically rows and columns - using a fixed schema that makes it easy to store, search, and analyze, often via SQL. A metric is ~~qty~~ any ~~quantative~~ quantifiable measurement - page views, order count, response time - while a KPI (Key Performance Indicator) is a metric singled out because it directly tracks progress towards an important goal. for example Customer : Thandi ; Age : 25, Sales : R500, Location : Capetown.

12) Unstructured data :

Data that doesn't follow a fixed table format. Information such as videos, emails and images that doesn't fit nearly into tables, voices, emails etc.

13) Data warehouse

A central place where data from different ~~resources~~ is stored for analysis. for example, a company ~~stores~~ storing sales data from all its branches in one system. A supermarket has 50 stores. Each store ~~sales~~ produces sales data ~~ist~~ instead of keeping everything seperately, the company puts the data from all 50 stores into one Central system → datawarehouse.

14) Data Mining

Finding patterns and useful information in large amounts of data, for example, discovering that customers buy more on weekends. A supermarket analyses millions of transactions and ~~discoveries~~ discovers : Customers who buy baby nappies often ~~use~~ also buy baby wipes.
