15) Data Visualization

Presenting data visually using charts, graphs, or diagrams, for example a bar chart comparing monthly sales, instead of giving your manager this: January: R80 000, February: R65 000 → You create a line graph showing sales increasing each month.

16) Dashboard

A screen displaying important information and performance measures in one place. for example a dashboard showing daily sales, targets and customer complaints; A call-center manager ~~sees~~ opens one screen and sees calls answerd are 1 250, average waiting time: 2 minutes, Customer satisfaction is 91%.

17) Metric:

Any measurable value used to track something, for example, the number of calls answered a day

18) KPIs:

A specific measurement used to assess progress towards an important goal- for example, the percentage of customer complaints resolved ~~A~~ within 24 hours.

19) Benchmark:

A standard or reference point used for comparison, for example, comparing your teams' performance against an industry standard. Your call centres average customer waiting time is 5 minutes; the industry standard is 3 minutes.

Segmentation:

Dividing data/customers into groups based on shared on characteristics' for example, Grouping customers by age, location or buying habits.
